

## PP-OPT

### FOR YOUR OPTIMAL PRODUCTION PLANNING

PP-Opt assists companies in planning order sequences and in executing production processes. High investment costs and increasing competitive pressure do not permit production capacities to be left idle. With PP-Opt, orders can be handled according to freely selectable criteria (high punctuality, high throughput, et cetera). A clearly arranged planning board which is used to display and optimize all orders rounds off the scope of this software solution. PP-Opt is already being used in various branches and has increased productivity by more than ten per cent.

Modern working with PP-Opt

#### Your benefits

- Optimum planning of customer orders
- Fast replanning in case of failures, for example, is possible.
- Increase of transparency and traceability
- Clearly arranged and easy-to-handle planning board
- Planning according to definable criteria (high punctuality, high throughput, et cetera)
- Optimization of the production sequence on the basis of a model of the real plant
- Complex productions can be mapped in a model.

#### Our services for you

- Tailor-made solution which is optimally matched to the company
- Integration of existing systems

#### Target group

- Factories (also with a high production complexity)
- ERP/MES-producers

More success by optimized production

PP-Opt helps in complex production.
